

# Protecting your business

Independent cyber advice that delivers security and resilience

At Frazer-Nash, our consultants are applying their expertise and know-how to develop, enhance and protect our clients' critical assets, systems and processes.

By understanding your business and the complex interaction between the external environment and your people, technology and processes, we're able to add real value – helping you to preserve your capabilities, brand and reputation by combining skills and experience gained from operating across a range of industry and government sectors.

Our expertise comes not from a single engineering perspective, but from detailed knowledge of a broad range of disciplines and their application across different markets. Through a systems approach we combine our extensive skill set with our ability to think creatively. We add value to each stage of a project and continue to do so throughout the project's life.

“ Our multi-disciplinary teams provide independent, bespoke advice to address the challenges of cyberspace. We help assure your business performance. ”

Listening to you and understanding your business needs is key to our mutual success. We want you to be delighted by working with a company that genuinely understands your business, the challenges you face and what's really important to you – a high-quality result, complete reliability, value for money and a clear competitive edge.

## Our expertise

**Human factors:** we can help you manage the environmental, organisational, and human characteristics and behaviours which can impact on your business resilience

**Modelling and simulation:** developing scenarios and testing for a range of outcomes improves resilience and aids decision making

**Information assurance:** with considerable experience in managing business critical and sensitive information, we work with you to ensure your data processes are robust, resilient and secure

**Information systems:** we help you manage the interfaces between people, processes and systems

**Business continuity:** we help you develop robust systems and processes that resist disruption and recover quickly

## Adding value through systems engineering

Sometimes, a defined approach to a specific problem is all that is required. But more often than not, your challenges are framed by a wider context. So whatever the problem we take a holistic view.

We try to think like you and understand your assets, systems and processes. It's our business to solve your problems, so we work hard to gain a comprehensive understanding of your challenges. This means we can anticipate outcomes, test new ideas and find the optimum solution.

## Our people

The best results come from the best people. Our employees are talented, original thinkers who exchange ideas, share their knowledge and collaborate enthusiastically. We only employ those who combine outstanding technical expertise with commercial awareness. We look for people of openness and integrity who can work well with their colleagues, engage with our customers and get to the heart of the problem.

## A career with Frazer-Nash

We're continuing to grow and to help meet the demand for our services; we're looking for a wide range of specialists to join us.

## Your talent can make a difference

A career with us will mean working with world-class clients, collaborating with like-minded people and contributing your talent to the wider team. You will have the opportunity to work in diverse industries and throughout your career you'll reap the rewards associated with your personal and professional development.

## Your next move

If you'd like the opportunity to flourish within a collaborative environment, where creative thinking and entrepreneurial talent is recognised and rewarded, we want to hear from you.
