

Is your critical infrastructure resilient?

Ask yourself these questions:

Do you know which people and organisations you are dependent upon for their services, products, approval or goodwill?

Do you know who is critically dependent upon your organisation?

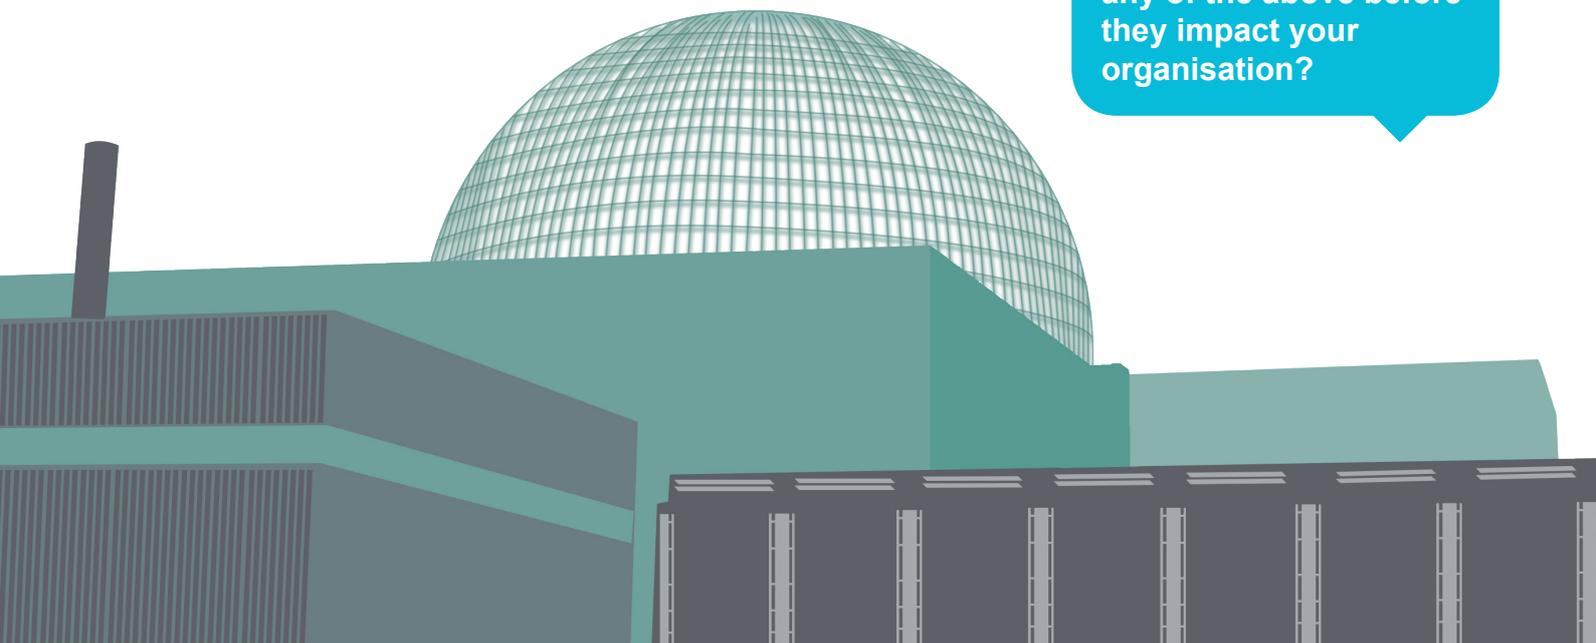

Do you have the structures, procedures, and training in place to recognise and manage an event which threatens your delivery of products or services?

Do you know what your risks are? What are the threats (accidental or deliberate) to your organisation and its assets?

Do you have a reliable way of comparing the cost effectiveness of different approaches to managing your risks?

Do you know which elements in your infrastructure are critical to delivering your products and services? Is that knowledge recorded and fed into a risk assessment?

Do you know how long you can survive without any of the above before they impact your organisation?

Why Frazer-Nash?

At Frazer-Nash, our experts are helping to protect people, assets and infrastructure by helping our clients understand and manage the risks they face. We're renowned for our resilience and security work supporting organisations in the nuclear, transport, defence, aerospace, energy and other industry sectors.

Our consultants are applying their expertise and know-how to develop, enhance and protect our clients' critical assets, systems and processes. By understanding your business and the complex interaction between the external environment and your people, technology and processes, we're able to add real value – helping you to preserve your capabilities, brand and reputation by combining skills and experience gained from operating across a range of industry and government sectors.

We know that maintaining the delivery of services during and after natural and human-driven incidents is critical to our clients' operations. By preparing people, technology and processes, we help preserve our clients' capabilities through combining skills and experience gained from operating across a range of industry and government sectors.
