

Greg

Video transcript

Hi. I'm Greg Nelson, I'm a senior engineer at Frazer-Nash and I'm in the Design and Structural Analysis Team here in Burton.

At Frazer-Nash, I am involved in the design of complex structures and that could be a rocket, or reactors or jet engines. I think the best bit about my job is the sort of things

I can work on and the variety, so being able to work on things that are the future, whether that's in aerospace or defence technology. Being able to be involved in those things and influence the design of those things is really cool.
